### Risk controls for fixing roof sheeting

Before applying a new risk control, review its use to ensure it does not introduce new risks during the tasks.

- Where practicable have sheets craned directly onto the roof.
- Use ergonomically designed hand tools.
- Use battery operated hand tools that also minimise vibration.
- Use pre-drilled roofing sheets or a good quality long drill bit.
- Take micro pauses and regular posture changes.
- Rotate task after 30 minutes maximum.
