### Risk controls for moving gas cylinders

Before applying a new risk control, review its use to ensure it does not introduce new risks during the tasks.

- Use smaller sized gas cylinders where practicable.
- Use appropriately designed trolleys to move gas cylinders around the site – such as large wheels for heavy loads, pneumatic tyres for uneven ground.
- Use a hoist to lift gas cylinder to upper floor levels.
- Plan the job to minimise the movement of cylinders.
- Maintain good housekeeping in your work area.
